

## Notes on retaking a bachelor's or master's thesis

- **Under certain conditions**, the thesis can be repeated but only once.  
When undertaking a thesis, should the candidate fail to compose their work on their own or fail to name all aids and sources used, the work will be evaluated as insufficient (6.0, ungenügend). The examination committee may decide, in severe cases, that the candidate will not be given the opportunity to retake the thesis, and thus the bachelor's or master's examination will be conclusively failed.
- The application must be made within a limited period after the announcement of the first thesis not having passed:
  - for the master's programs Chemistry, Medicinal Chemistry and COSOM
  - two months for the master's program SYNCAT
  - 4 weeks for the bachelor's program Business Chemistry or the master's program Business Chemistry
- A new topic is to be selected.
- A second retake is not possible.
